

Super Star Trek

A version of the classic game reworked to support running as a BBS door. Now displays ANSI color and attribute settings.

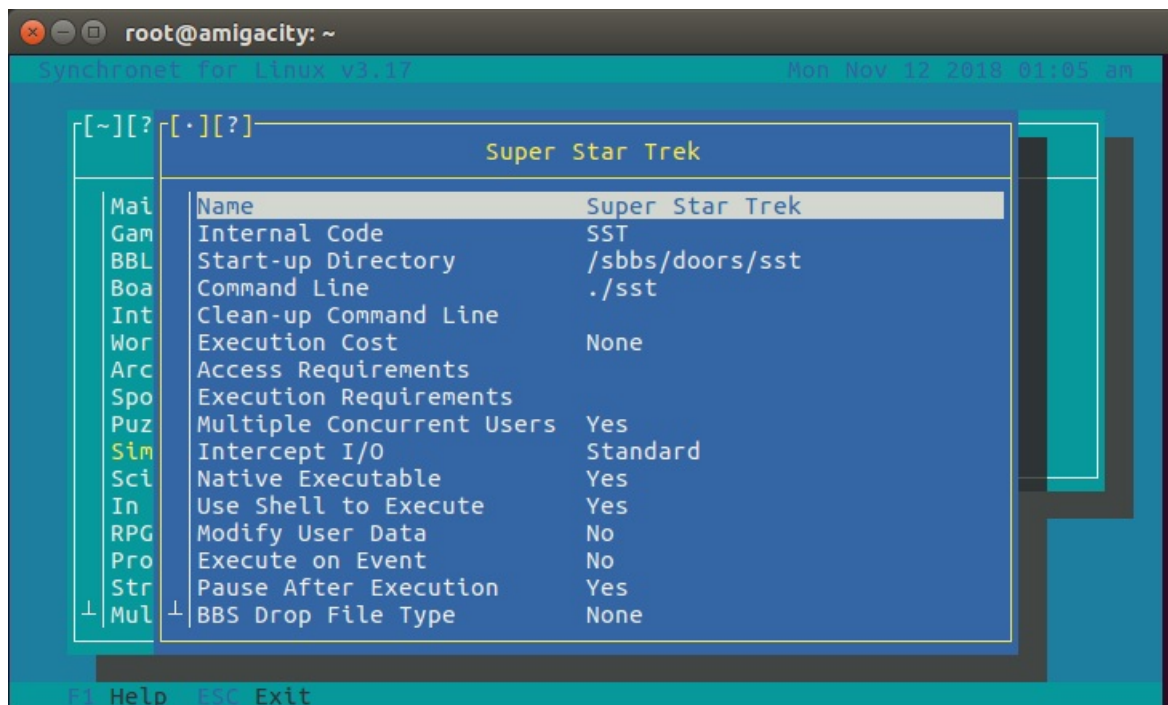

Official support sites: [Official Github Repo](#) - [Official Forum](#)

Installation Steps

- i. Extract files from .zip (You already did this, right?)
- ii. **mkdir -p /sbbs/doors/sst**
- iii. **cp sst sst.doc SST_Logo.txt /sbbs/doors/sst**

Run scfg and add a new door with these settings:

- i. **startup directory:** sst
- ii. **command line:** ./sst
- iii. **multiple concurrent users:** yes
- iv. **native executable:** yes
- v. **use shell to execute:** yes
- vi. **pause after execution:** yes

vii. everything else defaults...

-

Thats it!
